The Trac Browser

Error: Macro TracGuideToc(None) failed

```
'NoneType' object has no attribute 'find'
```

The Trac browser can be used to browse directories, change logs and specific revisions of files stored in a subversion repository.

Directory entries are displayed in a list with sortable columns. The list entries can be sorted by *name*, *size* or *age* by clicking on the column headers. The sort order can be reversed by clicking on a given column header again.

The browser can be used to navigate through the directory structure by clicking on the directory names. Clicking on a file name will show the contents of the file. Clicking on the revision number of a file or directory will take you to the revision history for that file.

It's also possible to browse directories or files as they were in history, at any given repository revision. The default behavior is to display the latest revision but another revision number can easily be selected using the *View revision* input field at the top of the page.

RSS Support

The browser module provided RSS feeds to monitor changes to a file or directory. To subscribe to an RSS feed for a file or directory, open its revision log in the browser and click the orange 'XML' icon at the bottom of the page. For more information on RSS support in Trac, see TracRss.
