The Trac Configuration File

Error: Macro TracGuideToc(None) failed

        'NoneType' object has no attribute 'find'

Trac configuration is done by editing the **trac.ini** config file, located in `<projectenv>/conf/trac.ini`.

Global Configuration

Since version 0.9, Trac can also read the configuration from a global `trac.ini` file. These global options will then be merged with the environment-specific options, where local options override global options.

The global configuration is by default localted in `$prefix/share/trac/conf/trac.ini`. It can be moved to a different location (for example, `/etc/trac.ini`), but that requires changing the file `trac/siteconfig.py` which gets created when Trac is installed.

Reference

This is a brief reference of available configuration options.

[trac]

database	<u>Database connection string</u> for this project
default_charset	Charset used in text files in the subversion repository (default is `iso-8859-15`)
default_handler	Name of the component that handles requests to the base URL (default is `WikiHandler`) (*since 0.9*)
repository_dir	Path to local Subversion repository
authz_file	Path to Subversion <u>?authorization (authz) file</u>.
authz_module_name	The module prefix used in the `authz_file` (See FineGrainedPermissions?)
check_auth_ip	Whether the IP address of the user should be checked for authentication (true, false) (*since 0.9*)
ignore_auth_case	Whether case should be ignored for login names (true, false) (*since 0.9*)
templates_dir	Path to the ClearSilver templates

[project]

name	Project name
descr	Short project description
url	URL to the main project website
icon	URL to icon file to use as shortcut icon (favicon)
footer	Page footer text (right-aligned)

[header_logo]

src	URL to image to use as header logo
link	Destination URL to link to from header logo
alt	*alt* text for header logo

`width`   Header logo width in pixels

`height` Header logo height in pixels

See also: <u>TracInterfaceCustomization</u>.

[logging]

`log_type`   Logging facility to use. (none, file, stderr, syslog, winlog)

`log_file`   If *log_type* is *file*, this should be a path to the log-file

`log_level` Level of verbosity in log (CRITICAL, ERROR, WARN, INFO, DEBUG)

See also: <u>TracLogging</u>

[attachment]

`max_size` Maximum allowed file size for ticket and wiki attachments

[notification]

`smtp_enabled`   Enable SMTP (email) notification (true, false)

`smtp_server`   SMTP server to use for email notifications

`smtp_user`   Username for SMTP server (*since 0.9*)

`smtp_password`   Password for SMTP server (*since 0.9*)

`smtp_from`   Sender address to use in notification emails

`smtp_replyto`   Reply-To address to use in notification emails

`smtp_always_cc`   Email address(es) to always send notifications to

`always_notify_reporter` Always send notifications to any address in the *reporter* field

`always_notify_owner`   Always send notifications to the ticket owner (*since 0.9*)

See also: <u>TracNotification</u>

[mimeviewer]

`enscript_path`   Path to the Enscript program

`php_path`   Path to the PHP program

`max_preview_size` Maximum file size for HTML preview (*since 0.9*)

`tab_width`   Displayed tab width in file preview (*since 0.9*)

[ticket]

`default_version`   Default version for newly created tickets

`default_severity`   Default severity for newly created tickets

`default_priority`   Default priority for newly created tickets

`default_milestone` Default milestone for newly created tickets

`default_component` Default component for newly created tickets

`restrict_owner`   Make the owner field of tickets use a drop-down menu (*since 0.9*)

[ticket-custom]

Creates user-defined ticket fields.

[timeline]

`default_daysback`	Default "depth" of the Timeline, in days (*since 0.9*)
`changeset_show_files`	Number of files to show (-1 for unlimited, 0 to disable)
`ticket_show_details`	Enable the display of all ticket changes in the timeline

[browser]

`hide_properties`	List of subversion properties to hide from the repository browser (*since 0.9*)

[wiki]

`ignore_missing_pages`	enable/disable highlighting CamelCase links to missing pages (*since 0.9*)

[components]

(*since 0.9*)

This section is used to enable or disable components provided by plugins, as well as by Trac itself. The component to enable/disable is specified via the name of the option. Whether its enabled is determined by the option value; setting the value to `enabled` or `on` will enable the component, any other value (typically `disabled` or `off`) will disable the component.

The option name is either the fully qualified name of the components or the module/package prefix of the component. The former enables/disables a specific component, while the latter enables/disables any component in the specified package/module.

Consider the following configuration snippet:

```
[components]
trac.ticket.report.ReportModule = disabled
webadmin.* = enabled
```

The first option tells Trac to disable the report module. The second option instructs Trac to enable all components in the `webadmin` package. Note that the trailing wildcard is required for module/package matching.

See the *Plugins* page on *About Trac* to get the list of active components (requires `CONFIG_VIEW` permissions.)

See also: TracPlugins

> *Note that prior to Trac r2335 (that applies to 0.9b1 and 0.9b2), you would use a `[disabled_components]` section instead. See a ?previous version of this page for the details.*
