The Trac Wiki Engine

Error: Macro TracGuideToc(None) failed

'NoneType' object has no attribute 'find'

Trac has a built-in wiki engine, used for text and documentation throughout the system. <u>WikiFormatting</u> is used in <u>wiki pages</u>, <u>tickets</u> and <u>check-in log messages</u>. This allows for formatted text and hyperlinks in and between all Trac modules.

Editing wiki text is easy, using any web browser and a simple formatting system (see <u>WikiFormatting</u>), rather than more complex markup languages like HTML. The reasoning behind its design is that HTML, with its large collection of nestable tags, is too complicated to allow fast-paced editing, and distracts from the actual content of the pages. Note though that Trac also supports <u>HTML</u> and <u>reStructuredText</u> as alternative markup formats.

The main goal of the wiki is making editing text easier and *encourage* people to contribute and annotate text content for a project.

The wiki itself does not enforce any structure, but rather resembles a stack of empty paper sheets, where you can organize information and documentation as you see fit, and later reorganize if necessary.

For more help on editing wiki text, see:
