

Accessibility Support in Trac

Not every user has a graphic environment with a mouse or other pointing device. Some users rely on keyboard, alternative keyboard or voice input to navigate links and activate form controls. In a Trac session, users can use devices other than a pointing device by enabling keyboard shortcuts through the [Keyboard Shortcuts](#) preferences panel.

Trac supports accessibility keys for the most common operations. The access keys differ by browser and the following work for several browsers:

- on Linux platforms, press any of the keys listed below in combination with the <Alt> key
- on a Mac, use the <Ctrl> + <Opt> key instead
- on Windows, you need to hit <Shift> + <Alt> + <Key>. This works for the most common browsers, such as Firefox, Chrome, Safari and Internet Explorer

Also see [?access in different browsers](#) for more details.

Global Access Keys

- 1 - [WikiStart](#)
- 2 - [Timeline](#)
- 3 - [Roadmap](#)
- 4 - [Search](#)
